

Team Discussion

1. Team Meeting

This week we had two meetings, on Wednesday and Friday

Wednesday Meeting:

We discussed how to approach this project, starting with the overall pipeline and how to scrape Reddit data from the website. We decided to use the Beautiful Soup library instead of the API, since it fits our needs and reduces setup overhead. We also aligned on work assignments, deliverables, and a rough timeline for each team member.

Friday Meeting:

We are halfway through the project, and in this meeting we mainly discussed how to proceed with the automation process—connecting automation, data scraping, and modeling to create a smooth pipeline. We reviewed a few blockers teammates faced during coding, paired on bug fixes, and confirmed next steps to keep the schedule on track and ensure we can complete this assignment on time.

2. Work Assigned:

Yiyang Jia: Code Skeleton & Reddit Scraping

Rongzi Xie: Cluster model and visualization & Documentation

Yihao Wang: Automation pipeline building

3. Github push records:

automation and query
 Yihao-8bit pushed 1 commit to main • c46a183...80dc1f2 • 3 hours ago
test
 Yihao-8bit pushed 1 commit to main • 048aa89...c46a183 • 20 hours ago
test push
 Yihao-8bit pushed 1 commit to main • f574be4...048aa89 • 20 hours ago
test push
 Yihao-8bit created perm-check/yihao • 048aa89 • 20 hours ago
update cluster and visualixation
 Bananarya pushed 1 commit to main • e54e40a...f574be4 • 21 hours ago
add scraping script
 Bananarya created main • e54e40a • yesterday
